Submission Date: 02/02/2026

Q-1. Write a Swift Playground program to perform the following operations on an integer array:

1. Declare and initialize an integer array with at least five elements and display it and print the number of index available in array.
2. Check whether the array is empty or not.
3. Add a new element at the end of the array.
4. Add multiple elements to the array at once.
5. Insert an element at a specific index.
6. Remove an element from a specific index.
7. Check whether a given element exists in the array.
8. Display the first and last elements of the array.
9. Sort the array in descending order.
10. Reverse the array.
11. Create a new array by doubling each element.
12. Create a new array containing elements greater than a given value.
13. Calculate the sum of all elements.
14. Print all elements using an index-based loop.

Q-2. Create a class BankAccount with deposit and withdraw methods and display balance.

Q-3. Create a base class Person with properties name and age. and Create a subclass Employee that inherits Person and calculate salary based on HRA and DA. (you should use super and self keyword).

Q-4. Create a real-life example (e.g., Shape → Circle) and override area calculation (You can use inheritance).

Q-5. Create a structure Book with title, author, and price. And display its details
